Access to Safe and Round the Year Drinking Water

Water scarcity touches the level of water crisis due to extreme events caused by climate change and topography resulting in limited access to drinking water in some regions of India. BAIF has developed an approach to overcome this issue for sustainable drinking water management.

The water crisis of Dandichi is the result of drying up of the eyes of the honorable, now will anything be done with the notice of the commission?

BAIF Approach:

- Community-led Governance and Water Resources Development based on Hydrogeology and Location.
- Resolved Drinking Water problems faced by Women in 77 Remote Villages of India.
- Strengthened Drinking Water Sources and Installation of Solar-powered system.
- Ensured Water-sufficient Villages.

Outcomes:

- Improved access to safe drinking water round-the-year.
- Drudgery reduction among women and reduction in health problems.
- Women no longer need to walk long distances to fetch drinking water.

Strengthening of Water Source

Rain Water Harvesting

Solar-powered Systems
